## **DETAILED ACTION**

### Response to Arguments

Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

In response to the applicant's argument that the prior art of record fails to disclose the skin-protective ingredient applied in a stripe, dot, or lattice pattern, it is noted that Roe discloses in column 24, lines 13-17, the application of lotion in a stripe pattern.

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as anticipated Ehrnsperger et al. (6,160,200), as evidenced by Roe et al. (5,607,760).

With respect to claims 1-3, 6, and 8-10, Ehrnsperger discloses all aspects of the claimed invention with the exception of the skin-protective ingredient being applied in a stripe pattern. Ehrnsperger discloses an absorbent article 20 comprising a liquid pervious topsheet 24, a backsheet 26, and an absorbent core 26, as shown in figures 1-6. A skin-protective ingredient containing layer is applied to the upper surface of the

Art Unit: 3761

topsheet 24, as disclosed in column 6, line 64-column 7, line 17, in a predetermined pattern. The skin-protective ingredient is fully capable of forming an oily film on the skin of a wearer. A support layer 60 is formed over the skin-protective ingredient containing layer, as disclosed in column 17, lines 59-62. The support layer 60 is soluble in water at and above 25 degrees Celsius, as disclosed in column 10, lines 36-53 and column 13, lines 1-23. It is the examiner's position that since the support layer is soluble in water, at 100% humidity, the support layer is therefore promoted at 100% humidity, which is greater than 30% humidity. The support layer 60 comprises polyvinyl alcohol, as disclosed in column 11, lines 38-41. The support layer 60 comprises, in at least a part of the absorbent article 20, only the soluble material 66, as disclosed in column 11, lines 3-5. The support layer 60 is therefore capable of exposing the skin-protective ingredient containing layer to the skin of a wearer after dissolving.

Ehrnsperger discloses in column 7, lines 2-5, the skin-protective ingredient comprises the lotion described in U.S. Patent No. 5,607,760 to Roe et al. The skin-protective ingredient of Ehrnsperger therefore inherently comprises the skin-protective ingredient described by Roe. Roe discloses a skin-protective ingredient applied to the topsheet of an absorbent article in a stripe pattern, the stripe being placed in the central portion of the topsheet, as disclosed in column 24, lines 13-17.

With respect to claims 3 and 4, Roe discloses the skin-protective ingredient comprises liquid at 35 degrees Celsius, as described in column 10, lines 5-10. Roe further discloses the skin-protective ingredient is petroleum jelly, as described in column 15, lines 55-56.

Art Unit: 3761

With respect to claim 7, Ehrnsperger discloses the absorbent article 20, as shown in figure 2, further comprises a leak-preventive cuff and a leg cuff, as disclosed in column 9, lines 49-50 and column 17, lines 18-55.

With respect to claim 11, Ehrnsperger discloses the support layer 60 further comprises a body adhering composition formed of a polyethylene oxide, as disclosed in column 15, lines 58-67.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. Lynne Anderson whose telephone number is (571) 272-4932. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tanya Zalukaeva can be reached on (571) 272-1115. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
